

Premera Cancer Support

Included with Personal Health Support

For self-funded groups

When a member is faced with a cancer diagnosis, the path forward can be daunting. To support our members in navigating the healthcare system, accessing care, and improving outcomes, we've added Premera Cancer Support in partnership with Thyme Care to our Personal Health Support program.

An integrated case management approach

Premera is the trusted industry leader in member case management with our Personal Health Support program.¹ We're extending that expertise to meet the needs of our members facing cancer treatment.

Strategic member investment

When we calibrate care management intensity to meet the needs of both high- and low-complexity members, we can improve your health plan's return on investment.

Personal Health Support

Provides one-on-one clinical case management support for members with complex, high-risk, and chronic conditions. We focus on whole-person care by addressing members' physical and mental health and helping them overcome barriers to healthcare.

Premera Cancer Support

Provides members with oncology-specific care and personalized support from pre-treatment to survivorship. Members use the wrap-around virtual solution when they're between oncology appointments or treatments. They can access their support team 24/7. This model improves outcomes and reduces acute care spend.

Raising the bar and meeting the need

The healthcare system is complicated. A cancer diagnosis can add a layer of complexity that creates an overwhelming or negative experience for the member. Premera Cancer Support prioritizes navigation and coordination of care from diagnosis to survivorship for our adult members (18+).

Nationwide access

Premera Cancer Support includes proactive member identification and engagement with coverage across all 50 states. Your clients can take comfort in knowing that their employees will receive exceptional cancer support no matter where they are and no matter their type of cancer.
