

Premera Predictor

A VIEW INTO FUTURE HIGH-COST CLAIMANTS

We understand that employers need a more focused strategy on high-cost claimants so they can better budget their business healthcare spend. This ranked as the **#2 priority** for employer initiatives in 2020 (NBGH Survey).

Premera innovates on your behalf

Because we understand your need to better manage your healthcare spend, we have developed an innovative predictive modeling tool to identify your future high-cost claimants. Built in partnership with Stanford statisticians and physicians, the model uses various member data sources, including consumer data, social determinants of health data, and medical and Rx claims data. Premera Predictor provides insights to inform clinical engagement strategies that can help with critical intervention opportunities for your future risk members.

TRANSFORMING DATA INTO FUTURE INSIGHTS

Each year,
6% of the
population
generates 34%
of all costs¹

We can predict future high-cost claimants with approximately

57%

accuracy in most cases².

How this can help you

You'll get predictive data in the following categories to aid your business budgeting and planning:

- Future high-cost claimants
- ER and inpatient admissions
- Behavioral health claimants
- Clinical drivers (in development)

Additional support:

- Comprehensive reporting that helps identify opportunities for targeted communication and programs to help better engage employees
- Recommendations on additional resources and point solutions that could mitigate future high-cost claimants

Contact your Producer or your Premera representative for more information on how this solution can meet the needs of your business.
