Introduction

The goal of hospice care is to provide the highest quality of life possible to people who have progressive life threatening conditions that cannot be cured and are in the last phases of life. It is not intended to prolong life by pursuing diagnostic work-up or aggressive therapy with the goal of reversing or curing the underlying disease process.

Admission to an inpatient facility (acute care hospital or acute inpatient hospice facility) may be recommended to provide active management of pain and/or other symptoms associated with a patient's medical condition that cannot be managed in lower level care settings. This acute symptom management is intended to be a short stay, until the medical conditions can again be managed in a less intensive setting.

Note: The Introduction section is for your general knowledge and is not to be taken as policy coverage criteria. The rest of the policy uses specific words and concepts familiar to medical professionals. It is intended for providers. A provider can be a person, such as a doctor, nurse, psychologist, or dentist. A provider also can be a place where medical care is given, like a hospital, clinic, or lab. This policy informs providers about when a service may be covered.

Coverage Guideline

This guideline outlines criteria to determine the appropriateness of admission to an acute inpatient level of hospice care for members who have chosen to use the Hospice benefit at the end of life.

Service	Coverage Criteria
<p>Admission to acute inpatient hospice</p>	<p>Must meet <u>both</u> the severity of medical condition criteria and the intensity of care criteria:</p> <p>Severity of Medical Condition (at least one of the following):</p> <ul style="list-style-type: none"> The patient is near imminent death or in the active dying process with life expectancy of 7 days or less, evaluated and documented by the medical practitioner who is treating the patient. <p>OR</p> <ul style="list-style-type: none"> The patient is currently in a hospice lower level of care with escalating symptoms that cannot be successfully managed, requiring daily medical practitioner management and 24-hour nursing to manage medications and monitor symptoms. <p>AND meets all four of the following:</p> <ul style="list-style-type: none"> The patient’s diagnosis is known and treatment regimen has been established. Clinical findings are worsening or not improving in the last 24 hours with the established treatment regimen. The patient and family understand goals of hospice and accept hospice intervention and management. Both the multidisciplinary care team and family are actively participating in care management. <p>AND</p> <p>Intensity of Care (at least one of the following):</p> <ul style="list-style-type: none"> The patient is acutely decompensating requiring frequent monitoring and management of active symptoms for purpose of comfort. <p>OR</p> <ul style="list-style-type: none"> The patient requires frequent change of medications and daily medical practitioner management. <p>OR</p> <ul style="list-style-type: none"> The patient requires complex and frequent medication administration, route and/or frequency cannot be delivered at a

Service	Coverage Criteria
	<p>lower level of care setting.</p> <p>AND</p> <ul style="list-style-type: none"> • A multidisciplinary care team and family is actively participating in care planning, including discharge planning to lower level of care setting when symptoms have improved and can be managed in a less acute setting.
<p>Continued stay in acute inpatient hospice</p>	<p>Must meet the following Intensity of Care (at least one of the following) criteria:</p> <ul style="list-style-type: none"> • The patient is acutely decompensating requiring frequent monitoring and management of active symptoms for purpose of comfort. <p>OR</p> <ul style="list-style-type: none"> • The patient requires frequent change of medications and daily medical practitioner management. <p>OR</p> <ul style="list-style-type: none"> • The patient requires complex and frequent medication administration, route and/or frequency cannot be delivered at a lower level of care setting. <p>AND</p> <ul style="list-style-type: none"> • A multidisciplinary care team and family is actively participating in care planning, including discharge planning to lower level of care setting when symptoms have improved and can be managed in a less acute setting.

Documentation Requirements

The medical records submitted for review should document that medical necessity criteria are met.

For admission to acute inpatient hospice, clinical documentation must support BOTH severity and intensity of care criteria below:

A. Severity of Medical Condition:

- Patient is near imminent death or in active dying process, expected to live in 7 days or less

OR

Documentation Requirements

- The patient is currently in a hospice lower level care, but patient's worsening symptoms can no longer be successfully managed at a lower level of care

AND ALL of the following:

- The patient's diagnosis is known and treatment regimen has been established
- The treatment had been helping until now, but the patient has gotten worse within the last 24 hours
- The patient and the patient's loved ones know that treatment in an acute inpatient hospice is only for supportive care, not to try to cure the condition
- The patient, loved ones, and medical professionals make care decisions together

B. Intensity of Care (at least one of the following):

- Patient's worsening condition requiring frequent monitoring and management of symptoms for comfort care

OR

- Patient needs frequent change of medications and daily and daily medical practitioner management

OR

- Patient's complex and frequent medication needs cannot be delivered at a lower level of care setting

AND

- The member, loved ones, and medical professionals make care decisions together including discharge planning to lower level of care setting when symptoms have improved and manageable in a less acute setting

For continued stay in acute inpatient hospice, the member must continue to meet Intensity criteria B above.

N/A

Related Information

Definition of Terms

Actively dying: The hours or days preceding imminent death during which time the patient's physiologic functions wane.⁶

Comfort care: A type of care that helps or soothes a person who is dying. The goal is to prevent or relieve suffering as much as possible while respecting the dying person's wishes.⁷

Hospice: A comprehensive model of care designed to meet the needs of people and their families whose goals of care are focused on quality of life rather than cure while facing a life-limiting illness. Hospice focuses on comfort care and emotional support to help enhance coping with the transition at end of life, using the patient's wishes as a primary guide. Hospice care helps to ease disease symptoms such as pain, nausea, and breathing problems, while helping to address the emotional, mental and spiritual needs of the patient and family and friends.⁸

Hospice team: Includes medical practitioner, nurse, social worker, chaplain, pharmacist, hospice aid, and volunteer.

Imminent death: Sudden physiologic changes resulting in symptoms such as: loss of appetite, excessive fatigue and sleep, increased physical weakness, mental confusion or disorientation, labored breathing, social withdrawal, changes in urination, swelling in feet and ankles, coolness in the tips of fingers and toes, or mottled veins.

Palliative care: Palliative care means patient and family-centered care that optimizes quality of life by anticipating, preventing, and treating suffering. Palliative care throughout the continuum of illness involves addressing physical, intellectual, emotional, social, and spiritual needs and to facilitate patient autonomy, access to information, and choice.¹
