Introduction

A "single nucleotide variant" (SNV) is a change in a specific section of a person's DNA. These changes may increase a person's risk of developing breast cancer. Medical studies have not shown that doing genetic tests to look at these SNVs is effective and reliable in predicting a person's chance of getting breast cancer. For this reason, testing for one or more SNVs to predict a person's risk of getting breast cancer is considered unproven (investigational).

Note: The Introduction section is for your general knowledge and is not to be taken as policy coverage criteria. The rest of the policy uses specific words and concepts familiar to medical professionals. It is intended for providers. A provider can be a person, such as a doctor, nurse, psychologist, or dentist. A provider also can be a place where medical care is given, like a hospital, clinic, or lab. This policy informs them about when a service may be covered.

Policy Coverage Criteria

Testing	Investigational
One or more single nucleotide variants (SNVs)	**Testing for one or more single nucleotide variants (SNVs) to predict an individual's risk of breast cancer is considered investigational.**
BREVAGenplus®	**The BREVAGenplus® breast cancer risk test is considered investigational for all indications, including but not limited to use as a method of estimating an individual patient's risk for developing breast cancer.**

Note: BRCA genetic testing should be used in those from high-risk families (see **Related Policies**).

Coding

Code	Description
CPT	
81479	Unlisted molecular pathology procedure
81599	Unlisted multianalyte assay with algorithmic analysis
84999	Unlisted chemistry procedure

Note: CPT codes, descriptions and materials are copyrighted by the American Medical Association (AMA). HCPCS codes, descriptions and materials are copyrighted by Centers for Medicare Services (CMS).

Related Information

Genetic Counseling

Experts recommend formal genetic counseling for patients who are at risk for inherited disorders and who wish to undergo genetic testing. Interpreting the results of genetic tests and understanding risk factors can be difficult for some patients. Genetic counseling helps individuals understand the impact of genetic testing, including the possible effects the test results could have on the individual or their family members. It should be noted that genetic

counseling may alter the utilization of genetic testing substantially and may reduce inappropriate testing. Further, genetic counseling should be performed by an individual with experience and expertise in genetic medicine and genetic testing methods.

Evidence Review

Description

A number of single nucleotide variants (SNVs), which are single base-pair variations in the DNA sequence of the genome, have been found to be associated with breast cancer and are common in the population but confer only small increases in the risk of getting breast cancer. Commercially available assays test for several SNVs to predict an individual's risk of breast cancer relative to the general population. Some of these incorporate clinical information into risk prediction algorithms. The intent of this type of test is to identify subjects at increased risk who may benefit from more intensive surveillance.

Background

Gene Variants And Breast Cancer Risk

Rare, single-gene variants conferring a high risk of breast cancer have been linked to hereditary breast cancer syndromes. Examples are mutations in BRCA1 and BRCA2. These, and a few others, account for less than 25% of inherited breast cancer. Moderate risk alleles, such as variants in the CHEK2 gene, are also relatively rare and apparently explain very little of the genetic risk.

In contrast, several common SNVs associated with breast cancer have been identified primarily through genome-wide association studies (GWAS) of very large case-control populations. These alleles occur with high frequency in the general population, although the increased breast cancer risk associated with each is very small relative to the general population risk. Some have suggested that these common-risk SNVs could be combined for individualized risk prediction either alone or in combination with traditional predictors. Personalized breast cancer screening programs could then vary by the starting age and intensity of screening according to the person's risk. Along these lines, the American Cancer Society recommends that women at high risk (>20% lifetime risk) should undergo breast magnetic resonance imaging (MRI) and a mammogram every year, and those at moderately increased risk (15%-20% lifetime risk) should

talk with their doctors about the benefits and limitations of adding MRI screening to their yearly mammogram.[1]

Clinical Genetic Tests

BREVAGenplus®

BREVAGenplus® (Phenogen Sciences, Charlotte, NC) evaluates breast cancer-associated SNVs identified in GWAS. The first-generation test, BREVAGen, included 7 SNVs. In a 2015 report, the test included over 70 susceptibility SNVs.[2]. Risk is calculated by combining individual SNV risks with the Gail model risk. BREVAGenplus® has been evaluated for use in African-American, white, and Hispanic patient samples age 35 years and older. BREVAGenplus® does not detect known high-risk mutations (eg, in BRCA). According to the BREVAGenplus® website, the test is not applicable to women who are already at high risk of breast cancer including those that have a personal or extensive family history of breast and/or ovarian cancer, LCIS [lobular carcinoma in situ], DCIS [ductal carcinoma in situ], AH [atypical hyperplasia] or have had prior thoracic RT [radiotherapy] under age 30. Any women with these risk factors are already at increased risk of breast cancer and should be screened and followed as such.[3]

Summary of Evidence

For individuals who are asymptomatic and have an average risk of breast cancer by clinical criteria who receive testing for common SNVs variants associated with a small increase in the risk of breast cancer, the evidence includes observational studies. Relevant outcomes are test accuracy and validity, morbid events, and quality of life. Information about analytic performance (reproducibility) of currently marketed tests is lacking. Clinical genetic tests may improve the predictive accuracy of currently used clinical risk predictors. However, the magnitude of improvement is small, and clinical significance is uncertain. Whether the potential harms of these tests due to false-negative and false-positive results are outweighed by the potential benefit associated with improved risk assessment is unknown. Evaluation of this technology is further complicated by the rapidly increasing numbers of SNVs associated with a small risk of breast cancer. Long-term prospective studies with large sample sizes are needed to determine the clinical validity and utility of SNV-based models for use in predicting breast cancer risk. The discrimination offered by the genetic factors currently known is insufficient to inform clinical practice. The evidence is insufficient to determine the effects of the technology on health outcomes.

Ongoing and Unpublished Clinical Trials

Some currently unpublished trials that might influence this policy are listed in **Table 1**.

Table 1. Summary of Key Trials

NCT No.	Trial Name	Planned Enrollment	Completion Date
Ongoing			
NCT02620852	Enabling a Paradigm Shift: A Preference-Tolerant RCT of Personalized vs. Annual Screening for Breast Cancer (WISDOM)	100,000	Dec 2020

NCT: national clinical trial.

Practice Guidelines and Position Statements

National Comprehensive Cancer Network (NCCN)

Current guidelines from the NCCN identify the following limitations of multigene cancer panels: unknown significance of some variants, uncertain level of risk associated with most variants, and unclear guidance on risk management for carriers of some variants.[85]

American Society of Clinical Oncology

For breast cancer risk assessment, the American Society of Clinical Oncology recommends the Gail model[86] or risk models for women with elevated risk based on family history (eg, Claus et al.[87] or Tyrer et al.[88])[89]

U.S. Preventive Services Task Force Recommendations

No U.S. Preventive Services Task Force recommendations for SNV testing either in conjunction with or without consideration of clinical factors to predict breast cancer risk have been identified.

Medicare National Coverage

There is no national coverage determination (NCD). In the absence of an NCD, coverage decisions are left to the discretion of local Medicare carriers.

Regulatory Status

Clinical laboratories may develop and validate tests in-house and market them as a laboratory service; laboratory-developed tests must meet the general regulatory standards of the Clinical Laboratory Improvement Amendments (CLIA). BREVAGenplus® (Phenogen Sciences, a subsidiary of Genetic Technologies, Melbourne, Australia) is available under the auspices of CLIA. Laboratories that offer laboratory-developed tests must be licensed by CLIA for high-complexity testing. To date, the U.S. Food and Drug Administration has chosen not to require any regulatory review of this test. Under current regulations, CLIA requires that laboratories demonstrate the analytical validity of the tests they offer. However, there is no requirement for a test to demonstrate either clinical validity or clinical utility. Some states (eg, New York) have chosen to regulate direct-to-consumer (DTC) laboratories. Because these reviews are not public, the scientific standards applied are unknown.

History

Date	Comments
07/12/11	Add to Pathology/Laboratory Section - New medical policy with literature search through March 2011; considered investigational. ICD-10 codes included.
05/24/12	Policy renumbered to 12.04.63 (previously 2.04.63) and reassigned to new Genetic Testing category.
07/20/12	Replace policy. Policy updated with literature search, references 12, 13, 19-22, 27-30 added. No change to policy statement.
10/10/12	Update Coding Section – ICD-10 codes are now effective 10/01/2014.
01/11/13	Effective 1/1/13, CPT codes 81200 – 81479 will be used for lab testing; these replace codes 83891 – 83912 which are deleted effective 12/31/12.
05/14/13	Update Related Policies. Add 12.04.91.
07/24/13	Replace policy. Policy updated with literature search through April 9, 2013; references 23-33 added. No change to policy statement.
10/17/13	Update Related Policies. Change title to 12.04.57.
11/21/13	Update Related Policies. Add 12.04.93.
01/16/14	Update Related Policies. Change title to 12.04.504.
06/09/14	Annual Review. Policy updated with literature review through March 18, 2014. Policy combined with Policy No. 12.04.57 (Non-BRCA Breast Cancer Risk Assessment [eg, OncoVue®]) and title changed to "Use of Common Genetic Variants (SNPs) to Predict Risk of Nonfamilial Breast Cancer;"; references 1-2, 6-8, 34-45, 48-50, 52-53, 56-64, 66-67, 69-70, 74, and 96 added. Investigational policy statement for OncoVue® and BREVAGen® modified to indicate investigational for all indications.
07/23/14	Update Related Policies. Remove 12.04.91.
06/17/15	Annual Review. Policy updated with literature review through March 3, 2015. References 1, 2, 49, 52, 56, 65, 72, 73, 76, 108 added; references 1 and 4-5 deleted. Policy statements unchanged.
12/01/16	Annual review, approved November 8, 2016. Policy updated with literature review; reference 113 added. Added code 81479. Policy statements unchanged.
09/22/17	Policy moved into new format. No changes to policy statement.
12/01/17	Annual Review, approved November 9, 2017. Policy updated with literature review through August 2017; references 2, 76, and 82 added; some references removed; "polymorphisms" changed to "variants" throughout policy. OncoVue removed from

Date	Comments
	policy; it is no longer commercially available. Policy statements unchanged.

Disclaimer: This medical policy is a guide in evaluating the medical necessity of a particular service or treatment. The Company adopts policies after careful review of published peer-reviewed scientific literature, national guidelines and local standards of practice. Since medical technology is constantly changing, the Company reserves the right to review and update policies as appropriate. Member contracts differ in their benefits. Always consult the member benefit booklet or contact a member service representative to determine coverage for a specific medical service or supply. CPT codes, descriptions and materials are copyrighted by the American Medical Association (AMA).

Scope: Medical policies are systematically developed guidelines that serve as a resource for Company staff when determining coverage for specific medical procedures, drugs or devices. Coverage for medical services is subject to the limits and conditions of the member benefit plan. Members and their providers should consult the member benefit booklet or contact a customer service representative to determine whether there are any benefit limitations applicable to this service or supply. This medical policy does not apply to Medicare Advantage.

PREMERA | BLUE CROSS

An Independent Licensee of the Blue Cross Blue Shield Association

Discrimination is Against the Law

Premera Blue Cross complies with applicable Federal civil rights laws and does not discriminate on the basis of race, color, national origin, age, disability, or sex. Premera does not exclude people or treat them differently because of race, color, national origin, age, disability or sex.

Premera:

- Provides free aids and services to people with disabilities to communicate effectively with us, such as:
  - Qualified sign language interpreters
  - Written information in other formats (large print, audio, accessible electronic formats, other formats)
- Provides free language services to people whose primary language is not English, such as:
  - Qualified interpreters
  - Information written in other languages

If you need these services, contact the Civil Rights Coordinator.

If you believe that Premera has failed to provide these services or discriminated in another way on the basis of race, color, national origin, age, disability, or sex, you can file a grievance with:
Civil Rights Coordinator - Complaints and Appeals
PO Box 91102, Seattle, WA 98111
Toll free 855-332-4535, Fax 425-918-5592, TTY 800-842-5357
Email AppealsDepartmentInquiries@Premera.com

You can file a grievance in person or by mail, fax, or email. If you need help filing a grievance, the Civil Rights Coordinator is available to help you.

You can also file a civil rights complaint with the U.S. Department of Health and Human Services, Office for Civil Rights, electronically through the Office for Civil Rights Complaint Portal, available at https://ocrportal.hhs.gov/ocr/portal/lobby.jsf, or by mail or phone at:
U.S. Department of Health and Human Services
200 Independence Avenue SW, Room 509F, HHH Building
Washington, D.C. 20201, 1-800-368-1019, 800-537-7697 (TDD)
Complaint forms are available at http://www.hhs.gov/ocr/office/file/index.html.
